

[Gross] I secretly tested CBD sold online — You won't believe the results

(Scroll Down for Full Results)

Dear Reader,

Hi, I'm Dr. Fred Pescatore.

And I'd like you to do me a favor.

Think about the number of supplements you're currently taking each day for your achy knees, your elbows, your back. ...

Now think about how many you're taking for sleep...

Your mood...

Your weight...

Your skin...

If you're like some of my patients, it's probably in the double digits.

Now, let me ask you a strange question...

Dr. Fred Pescatore

30-year practicing physician,
NYT Best-Selling Author,
and Former President of the
International and American
Associations of Clinical Nutritionists

**What if you could replace *almost every* supplement in your
medicine cabinet...
With just a few simple drops?**

I know, it sounds almost too good to be true.

But in the next few minutes, I'm going to tell you about a revolutionary type of CBD that's allowed my patients to do just that.

It's the **first real breakthrough** I've seen in decades.

In fact...

**"The liquid in this tiny bottle has transformed my entire
medical practice."**

I've seen patients who were taking multiple supplements for their overworked joints, for sleep, mood, weight, and more...

Find greater relief than they've felt in years, with just a few simple drops a day.

And it's not just helping them with one specific issue...

They're feeling younger, fitter and experiencing an overall sense of wellbeing throughout their entire body.

And it's a difference I've seen with my own eyes.

Patients are looking leaner, their gait has improved, they're more focused and happier.

Even better, it finally solves one of the biggest questions I get asked whenever I recommend CBD...

"How much should I take?"

With this CBD, the answer is up to you.

You finally have the flexibility to increase or decrease the dosage as you see fit.

Use one dosage for stress, another for sleep and yet another for aches and pains from overworked joints – whatever you find works for you.

It's a streamlined CBD delivery method that finally puts the power back in your hands.

It's almost made my job too easy!

And now I want to tell you exactly how anyone can transform their health using this same secret.

You'll see studies from Johns Hopkins, Oxford University and the National Institutes of Health to name a few.

You'll also hear from other physicians who are seeing incredible results with quality CBDs like mine...

As well as patients whose lives have been changed forever.

But first, let me tell you a little more about myself.

I've been a practicing physician for the last 30 years.

I've appeared as an expert on natural medicine on shows like The O'Reilly Factor, Rachel Ray, The Today Show, Extra, The View and many more...

I've also written several best-selling books on natural health.

And while CBD is just starting to trickle out to mainstream doctors thanks to the passage of the Farm Bill in 2018...

As a doctor licensed in California, I've been using CBD to treat patients there for over 12 years now.

Which means I'm very familiar with a topic most doctors are just starting to learn about now.

And another question I get asked often, by patients and physicians alike is... how does this work?

How can just a few simple drops replace the majority of supplements in your patients' medicine cabinets?

Well here's the amazing answer...

CBD unlocks a secret system in your body that no one seems to be talking about

Let me explain...

You're no doubt familiar with the immune system, the nervous system and the circulatory system...

Well in the 90's, a brand-new system was discovered that touches nearly every aspect of your body...

From memory, to appetite, pain from overworked joints and sleep... there isn't a single function in your body that isn't influenced or modulated by this system.

It's known as the Endocannabinoid System or ECS.

And the way it works to keep your body in perfect balance and harmony is simply ingenious.

If you're in a stressful situation, the ECS instantly recognizes this and sends out natural endocannabinoids so you can relax...

If you're in pain the ECS sends out endocannabinoids to soothe the body...

Or if you're having trouble sleeping... the ECS delivers endocannabinoids to lower your cortisol levels and help you drift off to sleep.

And these are only a few examples.

As I stated before...

This secret system helps keep us healthy from head to toe...

From aches and pains to sleep, memory, blood sugar and more!

The ECS helps regulate virtually everything.

But here's the problem...

Just like your immune system, nervous system or circulatory system...

Your endocannabinoid system can start to weaken due to things like age and poor diet.

This is why so many aging Americans find themselves out of balance, which could be the underlying cause of many everyday symptoms of aging.

But luckily, this is exactly the problem *the right kind* of CBD can help solve.

And I'll tell you what I mean by the "right kind" of CBD in just a second.

You see, instead of taking multiple supplements for multiple aspects of your health...

CBD can work hand in glove with your ECS...

and target multiple aspects of health to help keep the body in perfect harmony.

If your ECS has weakened over time and isn't sending out natural endocannabinoids like it used to...

CBD rushes in with a healthy supply of what are known as phytocannabinoids (which are cannabinoids that come directly from the hemp plant) to help fill the gaps.

Imagine just a few simple drops of CBD to help maintain healthy blood pressure...

Soothe those everyday aches and pains from overworked joints...

And lower stress...

All at once!

That's the power we're starting to see with *quality* CBD products.

And unless you've been living under a rock... you've likely heard a thing or two about CBD yourself over the last few years.

It's been featured in multiple news stories produced by Fox News, CNN, The Wall Street Journal, Time Magazine, and more.

Countless celebrities are singing its praises...

And politicians from both sides of the aisle are now coming out in favor of CBD

So with all the hype surrounding it, you're probably wondering if it's true.

Well, after more than a decade of researching and prescribing it... I can tell you two things with absolute certainty.

First, the good news.

The amazing results people are reporting from CBD are backed up by the science...

Here are just a few studies...

- ***PAIN SOOTHED!*** Scientists from institutions such as Johns Hopkins, the National Institutes of Health and the University of Pittsburgh have all confirmed, in both animal and human studies, that CBD is effective in helping with everyday aches and pains from overworked joints....
- ***Sleep Improved!*** The University of Colorado conducted a study consisting of 72 adults which found CBD improved sleep in an eye-opening 66.7% of participants.
- ***Racing Thoughts Calmed!*** The same University of Colorado study consisting of 72 adults also found that stress scores decreased in 79.2% of patients after just one month of CBD use.
- ***Blood Pressure Perfect!*** *And then there's a* small study involving 9 young patients from Oxford University which found that just one dose of CBD was enough to help improve blood pressure.

And some of the world's foremost medical minds agree...

Dr. Andrew Whelton of Johns Hopkins University has called it "miraculous."

Dr. Sanjay Gupta, Chief Medical Correspondent for CNN says, "Countless patients are [healthier] today because of this and this alone."

And renowned medical author Dr. Will Cole has described it as, "a missing link in the health puzzle."

That's the *good* news.

Now, here's the problem...

Obtaining the incredible results we've been talking about isn't as simple as going out and picking any bottle of CBD off the shelf.

In fact, a recent study from the University of Pennsylvania found that...

You have only a 30% chance of getting a quality bottle of CBD if you don't learn what I'm about to tell you

Why?

Because there are huge problems with the industry as a whole that you need to hear about before you try anything.

And that's exactly why I've put this presentation together.

When I first started researching CBD about 12 years ago, I was just as confused as you...

But now, after more than a decade of research, study and patient experience...

I've learned why so many CBD products on the market fail to deliver.

I've also scoured the industry and worked closely with my own trusted manufacturer...

To develop a product that succeeds in all the areas other CBDs fail.

It's called ***PhytoSelect Drops***.

It's a full-spectrum hemp extract containing 600 mg of CBD in a convenient liquid format.

The liquid is what gives users so much control.

And makes it so simple to use.

And while you'll discover everything there is to know about PhytoSelect in the next few minutes, I do want to stress that I'm a doctor first, not a salesman...

You don't have to buy my brand...I mainly want to make sure you have the facts available to make an informed decision when choosing ANY brand of CBD.

That's why today I want to reveal...

5 industry secrets you *need* to learn before trying one drop of CBD

There are an infinite number of options to choose from when shopping for CBD...

But after I reveal these 5 industry secrets, you'll have all the knowledge you need to separate the CBD fact from the CBD fiction.

So let's dive in.

CBD secret #1: The CBD industry is the wild, wild west of the medical world

All other CBD secrets stem from this one fact...

Different states have different standards for CBD and federal oversight has been extremely lacking.

Which means manufacturers are policing *themselves* on everything from quality to safety.

And as you're about to see, when given the opportunity to cut corners and save money...

Many brands are choosing profits over your satisfaction and wellbeing.

On top of that, products are also pouring in from places like China and Taiwan. In fact, in 2018 China accounted for over 11% of the entire CBD market.

So your first step in choosing any CBD, is to make sure it's coming from a reputable source you can trust.

Which is exactly why every aspect of my PhytoSelect Drops CBD, from farm to bottle, is manufactured by the most reputable sources in the US.

To start, PhytoSelect uses only the highest quality hemp grown from certified farmers in Maine and Vermont...

It's then quality tested and processed at a 24,000 square foot, state of the art facility in North Carolina.

This facility has over a decade of experience and is committed to maximizing the health benefits of full-spectrum hemp extract.

As you'll see in a moment, the *full-spectrum* quality is an aspect very few manufacturers pay attention to, but it's critical to feeling the effects.

This is exactly why I chose them to manufacture my PhytoSelect Drops.

Because if you want to experience real results, ensuring you have the highest quality CBD is the most important step.

Which leads us to...

CBD secret #2: **What you see is almost *never* what you get** **when it comes to CBD**

This was one of the biggest surprises I found when I first started researching CBD years ago...

I'd read amazing studies about CBD changing the lives of people with overworked joint pain, sleep problems, stress, aging memory and more...

But then have patients walk into my office who'd tried CBD on their own and felt absolutely nothing. *Zero* results.

I couldn't figure it out.

But then I stumbled on a study that explained everything.

In 2017, scientists at University of Pennsylvania found something disturbing.

After looking at 84 different CBD products, they discovered...

70% of the CBD products were mislabeled!

Meaning the amount of CBD advertised on the bottle was *different* from the amount actually found in testing.

So it makes perfect sense.

If people aren't getting the proper dosage of CBD...

They're not going to get results.

Especially if the dosage of CBD is *under* the amount advertised.

But in fairness, this study was done about three years ago, just before CBD really started to takeoff in the mainstream.

So, I decided to do some testing of my own to see if anything had changed.

I sent three of the most popular brands I could find on the internet to be tested at a private lab in Denver...

And I wish I could say I was surprised by the results...

Quality testing found that 2 out of 3 bottles had under the amount of advertised CBD

You heard that right, 66% of the bottles were mislabeled.

Or almost exactly the same percentage the 2017 study found.

In fact, one bottle had almost no CBD at all!

In other words, it appears little has changed.

If you purchase a random CBD product you find online or at the store... the odds are stacked against you.

Which is why you need to research the brand of CBD you're going to purchase thoroughly...

Find out if they test to ensure that every bottle has the advertised amount of CBD.

This type of testing costs time and money, so unfortunately, you may find that some brands just aren't doing this.

But I wanted to be sure that any CBD product I support is held to the highest possible standards.

So I insisted that every batch of my new CBD, PhytoSelect Drops, is thoroughly tested for quality...

Especially when it comes to the amount of CBD advertised...

Which is why PhytoSelect Drops undergoes not one, not two, but **THREE** separate tests to ensure accuracy and quality!

One in-house and two in the industry's top-rated third-party lab.

So anyone using PhytoSelect can feel secure knowing they're getting the full advertised dose of quality CBD.

Which means they can also expect quality results as well...

Whether they're looking for relief from achy joints, better sleep, stress reduction, a memory boost or so much more...

PhytoSelect is the key to achieving maximum results.

Especially if someone has tried CBD in the past and felt nothing...

This is their chance to finally see what all the fuss is about!

And you're going to hear from people who did just that in a second...

But first let me fill you in on the third CBD secret you need to know before trying anything.

CBD secret #3: CBD won't get you high **BUT...**

If there's one thing that my patients are most concerned about when trying CBD it's whether or not it will impair their mental function...

Or in laymen's terms... "get them high".

And it's an excellent question, because both CBD and THC (the chemical responsible for marijuana's euphoric high) come from the exact same hemp plant.

But here's the good news...

Scientists are united in saying that CBD will not get you high.

Harvard states that, "While CBD is a component of marijuana, by itself it does not cause a "high."

And the World Health Organization goes even further stating that, "CBD exhibits no effects indicative of any abuse or dependence potential... To date, there is no evidence of public health related problems associated with the use of pure CBD."

Now that's a pretty convincing statement BUT...

I believe they're leaving out something extremely important... Something you must understand before choosing a CBD product.

Isolating CBD from the hemp plant without including any of the mind-altering THC chemical is not an easy process...

In fact, it's *very* difficult.

And in order to sell CBD legally, the government has mandated that each bottle must contain virtually no THC content...

Or specifically less than 0.3% THC.

A trace amount so small that it will have zero psychoactive effect.

But even with this law, CBD products are flooding the market that contain much, much more.

In fact Yale University states...

"Many leading CBD products contain surprisingly high concentrations of the [THC] chemical."

-Yale University

And the government has even taken action against a number of popular CBD brands for doing just that...

In fact, they've found popular CBD brands with THC content as high as 4, 5... sometimes even ***6 times over the legal limit!***

So once again...

Simply purchasing any brand of CBD off the shelf or online and hoping it's up to legal THC standards is like rolling the dice.

It's one of the best kept and dirtiest CBD secrets in the industry.

So how can you ensure your CBD contains less than 0.3% THC?

Two ways.

First, make sure your CBD uses an up to date and scientifically recognized extraction process to separate the CBD from the hemp plant.

PhytoSelect Drops uses a state-of-the-art technique known as Cold Ethanol Extraction on every batch of full spectrum hemp extract.

This process is recognized by industry leaders as one of the safest and most efficient methods for extracting CBD from the hemp plant.

It allows PhytoSelect Drops to confidently meet the legal THC thresholds...

While ensuring all of the vital cannabinoids and terpenes responsible for CBD's amazing results are included in every bottle.

And second...

You need to be sure any brand of CBD you select also tests for THC levels...

Because you can never be too safe.

That's why on top of using top-of-the-line extraction methods...

Every batch of PhytoSelect Drops is also tested *three* times for proper THC levels

Which means PhytoSelect Drops offers maximum results without the worry of mind-altering side effects.

And that's an absolute must for anyone interested in CBD.

You simply must be confident of the contents in your CBD bottle.

But unfortunately, that's getting harder and harder to do. Especially if you're shopping for CBD online.

Why? Because...

CBD secret #4: The internet is *flooded* with "FAKE" CBD!

Again, when it comes to purchasing CBD you have a LOT of options.

And if you're like me, the first place you'll start to look is online.

But when it comes to CBD, the internet can be one of the worst places to start your search.

Let's take a look at Amazon, one of the biggest online retail websites, as an example...

If you search for "CBD oil" on Amazon, you'll get an incredible ***4,000 different results***...

1-48 of over 4,000 results for "cbd oil"

You'll find liquids, creams, gummies and more.

But if you take a closer look at those results, you'll see something funny. See if you can spot it...

That's right. The bottles themselves all say "Hemp" oil... *NOT* CBD.

And if you look at the ingredient list on any of these bottles, you won't see CBD listed *anywhere*... only "Hemp" oil.

Now, you may be thinking... "Well, CBD comes from the hemp plant, so why's this a big deal?"

It's because hemp oil and CBD are two *very* different things.

First, hemp oil is usually shorthand for "hemp *seed* oil" - but the seeds of the hemp plant don't make CBD. CBD comes from the flowers, leaves, buds and stems.

But second and most importantly, ...

"Hemp oil" contains virtually no cannabinoids...

Whereas full spectrum hemp extracts with CBD, like my PhytoSelect Drops, contain a VAST array of them.

And if you think back to our discussion about the endocannabinoid system earlier, you'll remember that cannabinoids are absolutely crucial...

They're the natural compounds that interact with your ECS in order to help with pain, sleep, stress and more...

So if you were to purchase a bottle of hemp seed oil on Amazon, you'd essentially be getting an oil rich in omega fatty acids, vitamin E and protein...

But none of the most important ingredient that gives CBD its healing power!

So if you want a quality CBD product... stay away from online "hemp" oil.

It's just not the same thing!

And unfortunately, even if you *do* find actual CBD online or in a store... your search still isn't over because...

CBD secret #5: **Anything but CBD from *Full Spectrum*** **Hemp Extract is a complete waste of your time**

Let me explain...

We've talked a lot already about what to look for in a quality CBD product.

So let's say you're doing your research and you've finally found a CBD from a reputable source...

They run tests for quantity of CBD...

They run tests for quality...

They run tests for THC content...

And it definitely contains CBD and NOT just hemp seed oil.

You might think you’ve hit the jackpot but unfortunately, you have a little more work to do.

Why?

Because you still need to make sure that it’s a *full spectrum* hemp extract—not a CBD isolate or CBD distillate.

You’ll see plenty of CBD isolates and CBD distillates on the market but they’re not going to give you the same results as a full spectrum CBD.

Here’s why...

Full spectrum hemp extract is the only type that contains ALL the phytochemicals naturally found in the hemp plant...

That includes CBD, cannabinoids, terpenes, and more.

This is extremely important because when you have all the components of the plant working together, they *enhance* the benefits of the plant.

That means less overworked joint pain, better sleep, reduced stress and so much more!

It’s a concept known as the entourage effect and it’s only achievable when all components of the plant are contained in the product.

Imagine if you had a car with no muffler, no steering wheel and no brakes.

You could still start it, you could still drive it... but you wouldn’t get very far.

That’s exactly what it’s like taking anything other than full spectrum hemp extract.

And this isn’t just a theory...

CBD from Full Spectrum Hemp Extract has been scientifically shown to be one of the most effective type of CBD on the market

Now, I normally wouldn’t bore you with the specifics but I think this is important.

In 2015, researchers in Jerusalem tested a full spectrum hemp extract with CBD against an isolated CBD that did not contain all components of the plant...

They found that animals treated with full spectrum hemp extract CBD reported higher levels of overworked joint relief than those treated with the CBD isolate.

But it gets better...

Their relief also increased with higher doses of full spectrum CBD...

While the results remained the same for those taking an increased dose of isolated CBD.

Yes, the study found that the subjects enhanced their benefits by increasing the dose!

This is exactly why PhytoSelect Drops CBD is a full spectrum extract providing 600 mg CBD per bottle.

It’s also why I insisted on a liquid CBD format/product. Again...

With a liquid CBD product you can increase or decrease your dosage based on your own needs.

Overcoming the Bell-Shaped Dose-Response of Cannabidiol by Using Cannabis Extract Enriched in Cannabidiol

Ruth Galily¹, Zhannah Yekhtin¹, Lami Omd'ej Hanou²

Abstract

Cannabidiol (CBD), a major constituent of *Cannabis*, has been shown to be a powerful anti-inflammatory and anti-anxiety drug, without exerting a psychotropic effect. However, when given either intraperitoneally or orally as a purified product, a bell-shaped dose-response was observed, which limits its clinical use. In the present study, we have studied in mice the anti-inflammatory and anti-nociceptive activities of standardized plant extracts derived from the *Cannabis sativa* L., clone 202, which is highly enriched in CBD and hardly contains any psychoactive ingredients. In stark contrast to purified CBD, the clone 202 extract, when given either intraperitoneally or orally, provided a clear correlation between the anti-inflammatory and anti-nociceptive responses and the dose, with increasing responses upon increasing doses, which makes this plant medicine ideal for clinical uses. The clone 202 extract reduced zymosan-induced paw swelling and pain in mice, and prevented TNF α production *in vivo*. It is likely that other components in the extract synergize with CBD to achieve the desired anti-inflammatory action that may contribute to overcoming the bell-shaped dose-response of purified CBD. We therefore propose that *Cannabis* clone 202 (Avi-dekel) extract is superior over CBD for the treatment of inflammatory conditions.

So you can start with a low dose and work your way up.

Or use a different dose for those everyday aches and pains than you do for stress.

It's completely up to you!

And it's natural and safe.

Remember, even the World Health Organization stated...

"CBD exhibits no effects indicative of any abuse or dependence potential... To date, there is no evidence of public health related problems associated with the use of pure CBD."

Meaning it's non-addictive.

And the results people are getting from Full Spectrum hemp CBD oils that check all the boxes are simply amazing...

Especially for people who've tried CBD in the past and felt *nothing*.

Take Mike Walker.

Mike actually works with me at NuLogic Nutritionals and he was *very* skeptical about CBD.

He'd tried 3 different types of CBD capsules and at least two CBD balms in the past and felt ***nothing***.

But then he took PhytoSelect Drops and everything changed.

He'd take just one dropper-full whenever he felt stressed or jittery at work and felt calmer ***within minutes***.

But it's not just helping with his stress...

It's also helped him sleep better and soothed his occasional headaches.

As he puts it...

**"My bottle is just about empty because
I've been taking so much of it."**

And then there's Julia Albright.

Julia had sore feet as well as stress.

She says she's tried "so many other CBD products" and felt ***no effect*** with most of them.

But when she tried a full spectrum, liquid CBD oil, that checked all the boxes we've been talking about... she felt a difference almost immediately.

As she puts it...

**"I was feeling more relaxed and
the soreness in my heel went away."**

She felt so strongly about it she eventually tracked down the vendor and gave them a YouTube testimonial.

And you don't have to look far online to find other people who are singing the praises of CBD.

Lisa Wellington sometimes had a tough time sleeping...

And she tried almost everything to get more of it: Exercise, meditation, melatonin, magnesium...

You name it, she'd tried it.

But then she tried liquid CBD every night for a week and as she puts it, “it was clear I’d stumbled across something kind of remarkable.”

“My racing thoughts seemed to come to a screeching halt within an hour of taking it, and...

“When I got into bed I fell asleep as soon as my head hit the pillow.”

Even better, she woke up feeling refreshed and ready to take on the day.

This is the same experience my patients have enjoyed...

As well as countless Americans across the country.

And all it takes is finding a CBD that checks all the boxes.

Meaning it’s...

- ✓ **Manufactured from reputable sources in the USA**
- ✓ **Tested for quality**
- ✓ **Tested for quantity of CBD and THC**
- ✓ **Contains CBD, not just hemp seed oil**
- ✓ **And is a certified Full Spectrum hemp extract**

And now that you have all the knowledge, you can use it to research and find a CBD you trust.

Or, you can give my PhytoSelect Drops a try, risk-free, today. My team and I have already put in the work and developed one of the most high-quality CBDs on the market.

We labored over every detail of PhytoSelect Drops, even down to the taste!

Now, every quality CBD is going to have a bit of an earthy taste to it... it’s how you know you’ve got a full spectrum hemp extract.

But I always wondered, does CBD have to taste *THIS* bad?

The answer is NO!

We worked with our manufacturers to add a delicious hint of orange that makes PhytoSelect Drops one of the tastiest CBDs on the market.

In fact, we tried bottle after bottle until we zeroed in on one our whole team agreed was head and shoulders above the rest.

But it not only tastes better than any other CBD product we’ve tried, it’s also convenient.

Every bottle of PhytoSelect Drops fits in the palm of your hand.

So, it can conveniently go in your purse...

Your glove compartment...

Or even your coat pocket.

Which mean relief is always an arm’s length away!

And you can secure your very own bottle right now by clicking below.

But I'm sure you still have one question, "Is it worth it?"

Well, picture all the supplements I asked you to think about earlier... and now think about how much each of those cost.

I know people who are spending as much as...

- ✓ **\$99.95 a month on their sleep**
- ✓ **\$129.95 on achy joints**
- ✓ **\$89.95 on brain support and...**
- ✓ **\$99.95 on blood pressure support**

And that's being conservative.

Total that together and people are spending as much as *\$420.00 a month* on their health.

But today, you can purchase one bottle of my full spectrum PhytoSelect Drops to handle all those issues and more...

For just \$89.95.

That's a savings of around \$330.00 a month!

But it gets better!

While that is the current retail price...

I also know that times are tough...

And I want to ensure that as many people have access to this life-changing product as possible.

That's why today, you can get PhytoSelect Drops for a special price of just \$69.95 through this exclusive, one-time offer.

A chance at a savings like this seems like a no-brainer by itself...

But I want to make it even easier for you.

Again, I've seen my patients replace multiple supplements with just one bottle of PhytoSelect Drops...

And witnessed people who've never felt *anything* from CBD, obtain life-changing results they never thought possible.

But if for some reason this doesn't work for you...

If you're not able to replace some or all of your own supplements...

Or if you're unhappy for any reason at all...

You can feel secure in knowing that...

Every bottle of PhytoSelect Drops is backed by a 100% Money-Back Lifetime Guarantee!

That's right. If for some reason you're unhappy with any aspect of PhytoSelect Drops...

Simply send the unused portion back and you'll receive a full refund.

No questions asked!

But you need to act fast.

CBD sells out faster than anything else in my product line.

It's hard to keep it in stock.

So please click below now to see if supplies are available.

But please remember, you're under no obligation to purchase PhytoSelect Drops today.

It actually may help us keep more bottles in stock if you don't!

So feel free to research and find a quality bottle of CBD on your own. They're few and far between... but they do exist.

But if you want the comfort of knowing you can have a CBD that's...

- ✓ **Manufactured from reputable sources in the USA**
- ✓ **Tested for quality**
- ✓ **Tested for quantity of CBD and THC**
- ✓ **Contains CBD, not just hemp seed oil**
- ✓ **And is a certified Full Spectrum hemp extract**

Then please click below and secure your own supply of PhytoSelect Drops right now while it's still in stock.

And remember...

You have nothing to lose by trying PhytoSelect Drops today.

Your satisfaction is completely guaranteed by our **100% money-back lifetime guarantee.**

So if you're someone who's never experienced any results from CBD...

And you've been wondering what all the fuss is about...

You owe it to yourself to discover what a quality, science-backed, full-spectrum hemp extract with CBD can do for you.

So, click below right now while supplies last and find out today!

For all of us here at NuLogic Nutritionals, I'm Dr. Fred Pescatore. Thank you for your time today.
